# Osseo scalpel, Sagittal micro saw, MOS 5000, REF 5110nou

#### Safety measures

- The Micro Saw is delivered in non sterile condition. Clean, disinfect, and sterilize the Micro Saw before the first application and immediately after
- Operate the Micro Saw with a maximum speed of 15 000 rpm.
- Attache the Micro Saw to the motor only when it's standing still.
- Perform manipulations on the instrument only when the motor is at a
- Any guarantees on our part or other claims against us become void in the case of inappropriate use of the electronic motor or failure to comply with our instructions!
- Without a saw blade clamped, the Micro Saw should not be stored with the tensioning mechanism tightened.
- The instrument may only be used by competent and trained personnel.

#### Intended use / indication

The saws are intended for bone-working surgery. This includes ENT surgery, maxillofacial surgery, plastic surgery, neurosurgery and hand surgery. With the bone saw and clamped saw blade (standalone medical device), a piece of bone is removed to correct misalignments. In dental facilities, this is used in jaw osteotomy to convert

The saws may only be operated by expert and trained personnel. The intended use is obvious to the trained user.

### **Contraindication / Limitations**

Relative or absolute contra indications can arise from the general medical diagnose, or in special cases by a significantly increased risk to the patient through the use of motor-driven systems. Relevant cases in the literature must be taken into consideration.

Overview

#### Technical data, Sagittal micro saw, MOS 5000

#### 5110nou REF Weight 122 g Maximum torque 6 Ncm Maximum speed 15 000 rpm Oscillation angle 5 Transmission ratio 1:1 Coupling acc. to ISO 3964 Saw blade clamping depth 10 mm Saw blade thickness 0.40 mm

#### Motor connection Cooling clip coupling Saw blade Collet with shaft Handpiece Fastening nut Wrench

#### Operation

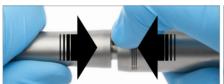

#### Coupling handpieces with a groove with the electronic motor with twist protection lock

Handpiece coupling with groove for twist protection.

Align groove at handpiece with the twist protection and connect handpiece with electronic motor by pressing the button. Check for proper seating.

Press the button and decouple handpiece from electronic motor.

Disassembly and assembly of the components to replace the saw blades and to feed the components into the reprocessing

Loosen fastening nut using the

Further open fastening nut with Remove or replace the saw blade. Loosen cooling clip by twisting your fingers.

Remove the cooling clip from it back and forth. the saw handpiece.

# Possibilities of combination

# Sagittal micro saw MOS 5000, REF 5110nou

Is exclusively used:

- In combination with the surgical motor systems HighSurg 11 (REF 3361), HighSurg 11 OFA-Drill (REF 3363) and HighSurg 30 (REF 3360), which control the sawing handpiece via the upstream electronic motor 21 and enable settings for speed and torque according to the tools used.
- In combination with the surgical motor system TCM 3000 BL (REF 3285), which controls the sawing handpiece via the upstream electronic motor 21 and holds a program with a fixed speed for the micro saw.
- In combination with the MD 30 implant motor system (REF 3330), which controls the sawing handpiece via the upstream electronic motor 21 and enables settings for speed and torque according to the tools used.

# Wrong combination of products

Damage to the product and injury to the patient, user or third parties are

- Only use the different products together if the purpose and the relevant technical data, such as working lengths, diameters and so on match.
- Always follow the instructions for use of the products used in combination.

# **Ambient conditions**

	Transport and storage:	Operation:		
Relative humidity:	Max. 90 %	Max. 80 %		
Temperature:	o – 60°C	10 - 30°C		
Atmospheric pressure:	700 – 1060 hPa	800 – 1060 hPa		

# Reprocessing instructions

Reprocessing restrictions

Frequent reprocessing has only a limited impact on the handpiece. The end of the products service life is normally determined by wear and damage through use. The instrument is designed for 250 sterilization cycles.

General handling

- 1. The micro saw must be thoroughly cleaned, disinfected and sterilised before initial operation (products straight from the factory) and also immediately following each use. Only a cleaned and disinfected instrument permits proper sterilization!
- 2. The instrument should always be treated with utmost care when being transported, cleaned, serviced, sterilised and stored.
- We recommend the use of mild alkaline and enzymatic cleaners with as low a content of silicate as possible in order to avoid staining (silicatising) the instruments.
- 4. Only commercial grade DGHM-/VAH-listed agents may be used for cleaning and disinfection. See these agent manufacturers' specifica-tions
- for the method of use, action time and suitability of disinfection and cleaning substances. 5. Follow precisely the operating instructions of the devices and chemicals etcetera, used during preparation.
- 6. Adhere exactly to the chemical dosages, action times and exposure temperatures during cleaning and disinfection.
- 7. The end of the product service life is determined by wear and damage through use. The micro saw is designed for 250 sterilization cycles.
- 8. Do not overload washer. Avoid rinsing blind spots. Pay attention to secure storage in the machine.
- 9. Follow the applicable regulations in your country for reprocessing medical devices.
- 10. Only the cooling clip may be cleaned in an ultrasonic bath. The micro saw must never be subjected to ultrasonic cleaning! This will impair the functionality.
- 11.API recommends using a screen basket with a rinse strip from 3mach (REF 51401), a re-usable container for comfortable preparation and storage (including transport) of products. The screen basket can be used to keep products safe both during the rinsing cy-cle and also during and after sterilization until the products are used. The screen basket is suitable for use with sterilization paper or a rigid sterilization container. It has no barrier effect itself in order to maintain sterility.

# Attention!

In relation to patients with Creutzfeldt Jakob disease or its variant (vCJK) no responsibility can be assumed for re-use of the micro saw. The Robert-Koch Institute recommends removing used products from circulation after use in order to avoid infecting other patients, users and

Preparation at the point of use After surgery immediately remove blood, secretion, tissue and bone residue with a disposable cloth/paper towel, do not allow to dry! Dried residues cause corrosion.

Safe-keeping and transport

Contaminated products must be stored and transported to the preparation site in a closed container to avoid damaging the products and the contamination of the environment.

Cleaning and disinfection, pre-cleaning

Remove saw blade, cooling tube, clips for the cooling tube attachment and cooling clip from the micro saw handpiece. Wipe visible impurities with a moist expandable cloth/tissue paper from the micro saw and accessories.

- 2. Brush the handpiece and accessories under running tap water using a soft brush (manufacturer Insitumed GmbH, REF MED100.33).
- Rinse the outer surface of the micro saw handpiece for 10 seconds with a water pistol (at a pressure of at least 2.0 bar; manufacturer for example HEGA Medical, REF 6010 or 7060). Local tap water is sufficient for this purpose, since the last step is always a machine cleaning with deionized water, so possibly hard water with lime traces from the pre-cleaning cannot remain on the handpiece.
- Rinse the cooling clip with a cleaning gun with a jet nozzle attachment (manufacturer HEGA Medical, REF 4270) for at least 30 seconds.

#### Cleaning Mechanical cleaning Automatic cleaning process (Vario TD programme) 1. After pre-cleaning place the micro saw and its accessories in the strainer basket. 1. Pre-clean with cold water for 4 minutes. Mechanical cleaning is only successful if the pre-cleaning, described above, is ad-2. Empty Clean for 5 minutes at 55°C with 0.5 % alkaline or Cleaning is done using the Vario TD programme in the cleaning and disinfection at 40°C with 0.5 % enzymatic cleaner. unit (CDU). For the cleaning process it is advisable to use DI water (fully desalinated Empty 4. water). Neutralise with cold water for 3 minutes. 4. After completing the cleaning programme (inc. Thermal disinfection) check the mi-6. Empty cro saw, the nut and the cooling clip for visible contamination in grooves and gaps. 7. Inter-rinse for 2 minutes with cold water. Repeat the cleaning cycle, if necessary. 8. Empty Warning / Disinfection Mechanical disinfection The cleaning/disinfection unit has a thermal disinfection programme which follows When inadequately rinsed or exposed to the disinafter the cleaning. When performing mechanical thermal disinfection, give due considfectant or detergent for too long, the instrument can eration to the national requirements relating to the Ao value (see DIN EN ISO 15883-1). corrode. Please see the corresponding detergent and We recommend an Ao value of 3,000 for the instrument. Disinfection must be carried disinfectant's package insert for dwell times. out with DI water. Drying Mechanical drying Manual drying Dry the micro saw using the cleaning/disinfection unit's (CDU) drying cycle. If required, Set up the micro saw in an upright position without manual drying can also be achieved by using a lint-free cloth. When drying manually, the nut and the cooling clip attached. take particular care with the grooves and gaps of the instrument. Then spray the instru-Dry the instrument for at least 30 minutes. Then ment again with NouClean spray. spray it with NouClean spray. Afterwards reassemble Every CDU must provide a corresponding drying procedure through the manufacturer the nut and the cooling clip back onto the instrument. (see ISO 15883-1). Please follow the corresponding CDU-manufacturer's directions and operating instructions. Warning / Manual cleaning Immerse the micro saw handpiece after pre-cleaning for 15 minutes in a bath with enzymatic cleaner (for exand disinfection ample 2 % ID 215, Dürr Dental). Clean accessories such as e.g. the cooling clip and the nut for 15 minutes in an Do not clean micro saw ultrasonic bath (1 % ID215). Follow the instructions of the manufacturer of the detergent. (handpiece) in an ultra-Perform a complete post-clean of the product under running drinking water, using a soft brush. Intensely rinse, sonic bath! if there is any cavities and lumens existing, with a water pressure gun (or similar) for at least 30 seconds. To remove the detergent, rinse the products under running city water (drinking quality) for at least 30 seconds.

# disinfection Manual drying

Manual

Set up the micro saw handpiece vertically, separated from the cooling clip, to make sure the outflow of water is favored. Dry products with a lint-free paper towel. Then dry with suitable compressed air in accordance with the RKI recommendation. Pay particular attention to the drying of hard to reach areas.

After cleaning, immerse the products for 5 minutes in a bath with a suitable disinfectant (for example 2 % ID 212, Dürr Dental). It must be en-

sured that all surfaces are completely wetted with the disinfectant. Follow the manufacturers instructions of the disinfectant.

#### Inspection and care

1. First unscrew the union nut and remove the cooling clip.

2. Perform a visual inspection for damage, corrosion and wear. 3. In the next step, spray the saw handpiece for cleaning and care. API recommends the use of NouClean spray. Place the spray attachment (REF 1958) on the spray can and spray the saw handpiece from the coupling side with NouClean spray for about 3 seconds until only clear liquid escapes from the saw handpiece.

After disinfection thoroughly rinse all products with deionised water to remove the disinfectant (>1 min.).

- Then wipe with a damp cloth (observe the instructions for use of the product).
- 5. After spraying the saw handpiece, re-install the cooling clip on the saw handpiece and screw the union nut onto the collet chuck.

#### Sterilisation

**REF 1958** 

Sterilisation of the micro saw handpiece is performed with a fractionated pre-vacuum steam sterilization technique (in accordance with DIN EN 556-1/DIN EN ISO 17665-1) giving due consideration to the respective national requirements.

#### Minimum requirements:

1. Pre-vacuum phases: 3

2. Sterilization temperature: At least 132°C.

- 3. Holding time: At least 3 minutes (full cycle).
- 4. Drying time: At least 20 minutes (max. 30 minutes).

Handling the sterile packaging

Before taking out the product, check for the packag-

When sterilising several products during one sterilization cycle, do not exceed the maximum sterilizer load. (see manufacturer's details). A drying cycle must be added in the case of autoclaves without a post-vacuum function. After sterilization an immaculate sterilization result must be detected by examining the appropriate indications. According to the Robert-Koch Institute preparation ends with the documented release for use of the instrument.

# Information for validating

the preparation

Storage

During storage, direct sunlight should be safely avoided. After the expiry date has ing to be intact. When taking out the product, follow passed, do not use the product any longer. the respective aseptic procedures.

The above preparation process has been verified by a validated procedure. The following materials and machines were used: Alkaline cleaner: Neodisher® Mediclean; Chemische Fabrik Dr. Weigert GmbH & Co. KG

The sterilised product must be stored away from dust, humidity and contamination.

- Enzymatic cleaner: Neodisher® MediZyme; Chemische Fabrik Dr. Weigert GmbH & Co. KG
- Cleaning and disinfection unit: Miele G 7836 CD
- Rack trolley: Miele E429
- Strainer basket/flush socket bar: 3mach (REF 51401)
- Autoclave: Selectomat 666-HP (MMM)
- Sterile packaging: Sterisheet 100; Broemeda Amcor Flexibles GmbH

Chemicals and machines other than those mentioned can also be used. In such a case consult the manufacturers or suppliers to find out whether their products confer the same performance as the products that the procedure was validated with. If you should opt for a different procedure for reprocessing to the one given above, you are required to correspondingly establish the suitability.

Note

There is no experience available from conducting other sterilization procedures such as plasma sterilization, low temperature sterilization procedure, etc. Users bear full responsibility if they use a procedure which differs from the validated sterilization procedure described!

Attention!

Please also comply with the applicable legislation in your country and the medical practice or hospital's hygiene rules. This especially applies to
